- ◆ Hung garment railing & storage systems.
- ◆ General engineering works.
- ◆ Custom made handling equipment designed & manufactured to order.
- ◆ Free quotes.
- ◆ Accredited contracting system.
- ◆ Full in house design team.

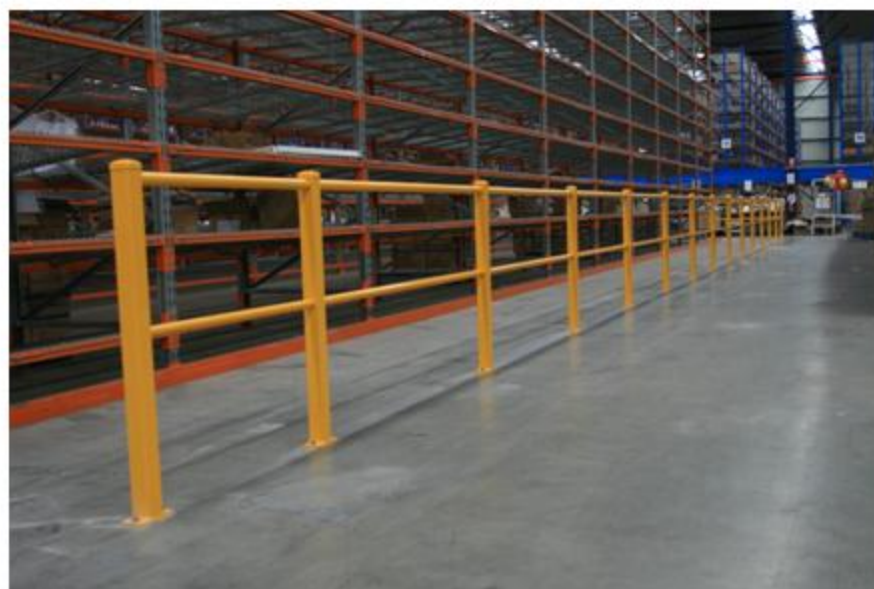

Bollards, Barrier Rails & Access Stairs

Appcon Engineering manufactures and installs bollards and barrier rails to protect personnel and plant equipment as required. These include single and double run 'W' beam barriers with either round or channel style support posts. Appcon also manufactures access stairs, walkway and platforms to conform with the relevant building codes and Australian standards.

Hand Railing Systems

Appcon Engineering manufactures and installs hand railing to internal and external warehouse environments. The hand railing can be supplied in either a galvanized or powder coated finish. Two main types of handrail are available either welded or non-welded. The non-welded hand railing is of particular use within factory warehouses where the use of welding and cutting equipment is not recommended due to hazardous environments or simply the interaction between staff and installers could produce OH&S issues. Appcon also supplies and install nudge angle as and when required to reduce the likelihood of damage to the hand railing systems from warehouse operating equipment.

Conveying Systems

Appcon supply and install a variety of different conveyor systems from both local & international manufactures. We have manufactured and installed conveyors for transportation of clothes trolleys, baskets and boxes in a multitude of different warehouse situations to suit customers differing handling requirements.

Mezzanine Floors

Appcon Engineering has individually designed and installed mezzanine floors and loading docks throughout Australia to customers individual needs. Mezzanine floors (single or double) can be installed in almost any warehouse to suit individual loading and storage requirements. Mezzanine floors increase the property value and can be easily relocated if required.

Picking Trolleys

Appcon manufacture and supply standard type picking trolleys or custom make to specific requirements with onboard scanning and processing including pick to light rails or pick to voice equipment in partnership with major equipment suppliers.

Custom Lifting Equipment

Appcon Engineering can custom make lifting equipment for use with forklifts. This includes lifting jibs, access cages and waste stillages to suit a customers individual materials handling requirements. All custom lifting equipment comes with individual certification if and as required.

Custom Equipment

Appcon Engineering design, manufacture and install a variety of custom machinery including folding hammocks, pallet access gates and mobile battery operated pneumatic lifting equipment complete with safety interlocks.

Racking Solutions

Appcon Engineering design and install racking systems to suit individual customer requirements for handling a multitude of different storage needs.
