

Mezzanine Floor Pallet Safety Gate

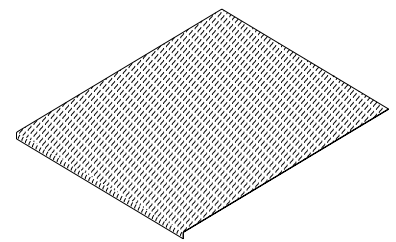

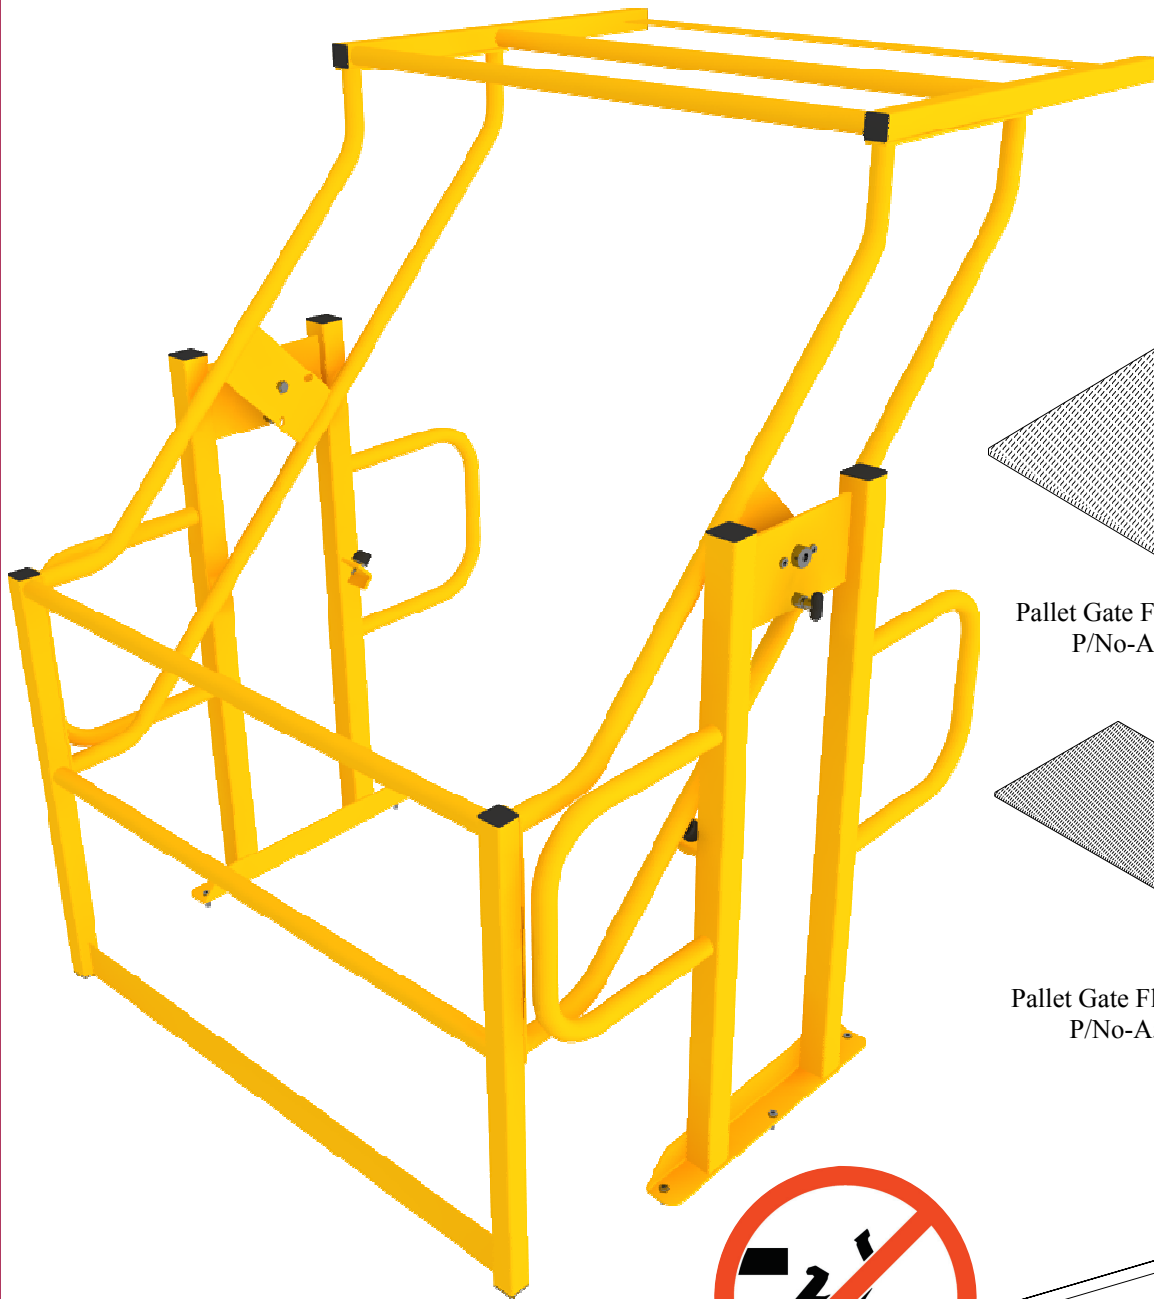

The Mezzanine Floor Pallet Safety Gate is designed for the safe loading and unloading of palletized goods from a mezzanine floor or elevated work area. The Pallet Safety Gate reduces the OH&S risks previously associated with this type of operation. The Pallet Safety Gate only requires approximately 5kg of force to operate. The Pallet Safety Gate accepts a standard 1800mm high pallet and oversize loads up to 1400mm x 1385mm at 1385mm high. It is also available in a double gate configuration. Custom load sizes and colors are available on request. The Pallet Safety Gate fits in neatly with most types of hand railing systems and can usually be retrofitted with minimal alterations required.

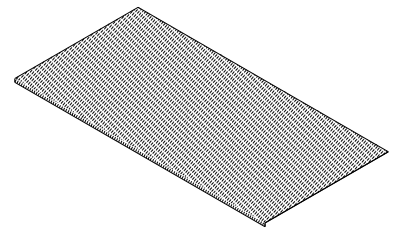

Manage your OH&S risk!
